Ho Chi Minh City

SUMMARY

Software Engineering with over 5 years of experience in software engineering. I specialize in developing and crafting server-side web application logic and back-end components using JavaScript/Python. I have actively participated in numerous successful projects across the dynamic markets of European, US, the UK, South Korea, Japan. In 2023, I was recognized as the recipient of **Brickmate's Employee of the Year award** for my exceptional contributions and innovative solutions. I am deeply passionate about learning new technologies and thrive on tackling challenges head-on.

EDUCATION

Computer Science

Ton Duc Thang University
Graduated

📅 08/2016 - 08/2020 📍 Location: District 7, Ho Chi Minh City

AWARD AND HONORS

The Most Contributed Employee Of The Year Brickmate Award 2023.

CERTIFICATE

[EF SET English Certificate C1-C2 level](#)

[AWS Certified Solution Architect Associate \(SAA - C03\)](#)

[Claude Code in Action](#)

[Claude Code 101](#)

[AWS Architecting Certificate](#)

[AWS Serverless Certificate](#)

[AWS EKS Certificate](#)

[GraphQL Developer Professional Certificate](#)

[Responsive Web Design Certificate](#)

[Frontend Developer \(React\) Certificate](#)

[SQL \(Advanced\) Certificate](#)

[PMI Generative AI Overview for Project Managers](#)

[PMI Fundamentals of Predictive Project Management](#)

[PMI Fundamentals of Agile Project Management](#)

SKILLS

- **Frontend:**
 - HTML/CSS, SASS.
 - ReactJS/NextJS, Redux-toolkit, Redux-saga, Zustand, React Query.
 - VueJs 3, Pinia, Vuex.
 - Ant design, Tailwindcss, Material UI.
 - Vite, Webpack.
 - EtherJs, Web3js
- **Backend:**
 - Javascript/TypeScript.
 - NodeJs: NestJS, HapiJs, ExpressJS, MoleculerJs.
 - Python: Django, Fastapi.
 - gRPC, tRPC.

- Jest.
 - Redis.
 - GraphQL.
- **Message queue:** RabbitMQ, BullMQ, MQTT, Kafka.
- **Design Pattern/Architecture:** Microservices, DDD, Clean Architecture, EDA, CQRS.
- **Database:** PostgreSQL, MongoDB, MySQL, MariaDB, DynamoDB.
- **ORM:** TypeORM, Mongoose, Sequelize, Prisma.
- **Devops:**
 - AWS (EC2, S3, RDS, Route 53, CloudFront, ELB, ASG, SNS, SQS, SES, ECR, ECS, Lambda, IoT core, CloudTrail, CloudWatch, CDK, CodeCommit, CodeBuild, CodeDeploy, CodePipeline, ElasticCache, Amplify, SAM, API Gateway, AWS EventBridge ...)
 - Naver Cloud Platform NCP.
 - Google Cloud Platform GCP
 - Gitlab runner, Github action CI/CD.
 - Prometheus, Grafana, NewRelic.
 - ELK.
 - Docker, K8s.
 - Terraform.
 - Linux, Nginx, Proxy manager.
- **Tool management:** Jira, Trello, Figma, Notion, Gitlab, Github, Swagger, Markdown, Firebase ...

EXPERIENCE

Software Engineer

Standage Inc.

📅 01/2025 - 07/2026 📍 Location: US, Tokyo, Dubai, Nigeria, Egypt.

- **Domains:** Web3, Blockchain, Logistic, E-commerce, Payment, AI ...
 - Developed a robust, maintainable, and scalable codebase by adhering to best practices with **NodeJs**.
 - Migrated the database from **MySQL** to **PostgreSQL** to enhance performance.
 - Utilized **Kafka** for message queuing to enable service communication in an **Event-Driven Architecture (EDA)** for a **Microservices-based** system.
 - Deployed services to **GCP** and **AWS**.
 - Performed **E2E** testing with **Playwright**.
 - Created a mobile-friendly, responsive website by implementing frontend functionality using **ReactJs**, **NextJs** while optimizing SEO to improve the overall user experience.
 - Developed unit tests using **Jest** for all components to ensure reliability and functionality.
 - Worked with **Blockchain** systems to handle trades using **cryptocurrency**.
 - Applied performance optimization techniques to improve efficiency.
 - Used the **NestJS** framework for application development.
 - Implemented **CI/CD** workflows using **GitHub Actions**.
 - Worked with **GraphQL** for API development.
 - Worked with **LLM models** and **Retrieval-Augmented Generation (RAG)** to develop **Generative AI** for a product company.
 - Utilized multiple **LLM models**, including **OpenAI**, **AWS Bedrock**, and **Google Vertex AI**.
 - Contributed to the development of the company product, **DigiTrad**.

Senior Fullstack (Contractor)

Digital Unicorn.

📅 01/2025 - 01/2026 📍 Location: France.

- **Domains:** E-commerce, AI...
- Delivered end-to-end solutions as a Senior Fullstack Developer using Node.js, Golang, and React, ensuring scalable architecture and clean, maintainable code.
- Integrated APIs, implemented CI/CD pipelines, and deployed services to AWS for high availability and performance.
- Collaborated directly with clients to gather requirements, propose technical solutions, and deliver high-quality features on time.

Senior Fullstack/Project Leader

Brickmate

📅 10/2021 - 01/2025 📍 Location: Lim 3 Tower

- **Brickmate.kr**
- **Domains: Advertising, IoT, Web3, Map, E-commerce, Healthcare, Fashion, Payment, AI ...**
 - Developed a robust, maintainable, and scalable codebase by adhering to best practices with NodeJs.
 - Applied performance optimization techniques to improve efficiency.
 - Utilized **Kafka**, **RabbitMQ** and **BullMQ** for message queuing to enable service communication in an **Event-Driven Architecture (EDA)** and for **database migration/synchronization**.
 - Implemented **gRPC**, **trRPC** to improve service communication performance.
 - Integrated with **IoT** devices using **MQTT** and **AWS IoT Core**.
 - Built the foundational codebase using the **NestJS** framework applied **Clean Architecture**.
 - Monitoring server by using monitor tool **Prometheus**, **Grafana**, **NewRelic** to error detection and spike traffic,
 - Developed a responsive website, implemented frontend logic using **ReactJs**, **NextJs** and **VueJs**, and optimized SEO to enhance user experience.
 - Building **serverless** application by using AWS services (**AWS Lambda**, **AWS SAM**, **AWS Cloudformation**, **AWS DynamoDB**, **AWS API Gateway**, **AWS EventBridge**, **AWS SNS**, **AWS SQS**)
 - Analyze and optimize data queries with **MongoDB**, **MySQL**, and **PostgreSQL**.
 - Config **Vite** to improve speed build Front-end Application and using **AWS Amplify serverless** to deploy it.
 - Designed and implemented a **low-latency**, **high-availability** architecture to ensure continuous service.
 - Configured **AWS Elastic Load Balancer (ELB)** and **AWS Auto Scaling Groups (ASG)** to manage traffic and ensure high availability.
 - Collaborated with team lead to set up **CI/CD** pipelines using **GitLab** and **AWS services (AWS ECR, AWS ECS, AWS CloudTrail, AWS CodeCommit, AWS CodeBuild, AWS CodeDeploy, AWS CodePipeline, AWS KMS)**.
 - Established workflow rules for development, staging, and production environments for smooth team collaboration.
 - **Lead projects**, working closely with PMs and clients to deliver optimal business solutions, estimate tasks, create project plans, and schedule milestones.
 - Reviewed code, optimized tasks, and delegated responsibilities to team members.
 - Developed **unit tests** using **Jest** for all components to ensure reliability and functionality.
 - Designed and implemented logical processes, modular components, and API routes to facilitate seamless frontend-backend communication.
 - Integrate with **ChatGPT (OpenAI API)** and building **OCR AI model** to converts an image of text into a machine-readable text format.
 - Designed the flow for **minting NFTs** on the Klaytn **blockchain**, particularly using the KIP17 token standard.
 - Conducted research and integrated third-party services.
 - Designed and implemented a **multi-payment gateway** flow for seamless transaction processing.
 - Hosting a seminar to sharing technologies.

Fullstack Developer

Payme technology

📅 09/2020 - 10/2021 📍 Location: Thu Duc City

- **Payme.vn**
- **Domains: E-Wallet Product, Banking, Payment Gateway, Fintech, Payment Tuition Systems.**
 - Developed services to establish SDK connections.
 - Implemented APIs to handle payment transactions efficiently.
 - Provided regular updates and reports to team leaders.
 - Integrated APIs and implemented frontend logic using React for a **responsive website**.
 - Migrated logic from **RESTful API** to **GraphQL**.
 - Enhanced the search functionality and gathered logs using the **ELK stack**.
 - Applied **Kafka** message queues for a microservices-based system.
 - Developed a Software Development Kit (SDK) for seamless integration.
 - Worked with **Domain-Driven Design (DDD)**, **CQRS** and **microservices architecture** (using the **Molecular framework**) to build a scalable, high-concurrency transaction **payment system**.
 - Built **API Gateway** integrate with **NATS** transporter.
 - Implemented strategies to zero downtime and optimize performance under heavy loads.

- Collaborated closely with project managers and clients to create effective solutions, accurately estimate task durations, design project plans, and set clear project timelines.
- Employed testing frameworks to ensure each component functioned as expected and delivered reliable results.
- Facilitated communication between services and the **Payment Gateway** for smooth transaction processing.
- Integrated and **encrypted/decrypted APIs**, handling data from various partner **banks** (ACB, Wooribank, ShinhanBank, Alipay, etc.) to provide multiple payment options.
- Utilized **Redis** caching to improve response times.
- Analyze and optimize data queries with **MongoDB**.
- Authored API documentation using **Swagger** and **Markdown**.

Fullstack Developer

Nashtech

📅 06/2019 - 08/2020 📍 Location: Etown

- [Nashtechglobal.com](https://nashtechglobal.com)
- Domains: E-commerce, Edtech, ...
 - Completed a 4-month training program in **Node.js (ExpressJs)** and **React.js (Redux)**, leading to promotion as a full-time employee.
 - Designed and implemented logical processes, modular components, and API routes to ensure smooth communication between frontend and backend systems.
 - Integrated APIs into a responsive website.
 - Reported to team lead and project manager.
 - Collaborated closely with project managers and the team lead to develop effective solutions for business challenges, accurately estimate task durations, create detailed project plans, and set clear timelines for project milestones.
 - Analyze and optimize data queries with **MongoDB**.
 - Employed testing frameworks and methodologies to validate that each component functioned correctly and delivered consistent performance.
